

# Step Ahead

## An\_Inclusive\_System\_for\_Children\_with\_Autism

### ABSTRACT:

Children with autism are unable to explain their issue which they face at school. They face difficulty to explain their mode, task done at school and home task to their parents. Parents, teachers, and school administrators face problems in communicating in between for a child's progress. The main aim of our project will be to build a communication portal between parents, teachers, and school administration. This project will be a mobile app-based learning management system to benefit parents, teachers, and administration who are involved in the life of a child with autism..

### OBJECTIVES:

This project will be a mobile app-based learning management system to benefit parents, teachers, and administration who are involved in the life of a child with autism. Admin will be able to register teachers, parents and create a class. Admin will assign ids to parent and teacher for login. Admin will make announcements and view the progress report of students. This system will help parents to view, like and comment on every announcement done by teachers or admin. This app helps parents to view attendance and progress report of their child updated by their teacher and they are also able to discuss every problem in chat.

### FUTURE WORK:

- Fee vouchers module will be add
- Online fee submission
- Notification feature for fee with due date
- Web based admin portal
- Module in which admin take review from parents

### TOOLS & TECHNOLOGIES:

- REACT NATIVE
- NODE
- EXPRESS
- MONGODB
- FIREBASE
